SKILLS

Languages & Development

Python, R, C, SQL, Git, Docker

Agentic AI & GenAI

LLMs, RAG, Graph RAG, AI Agents, Agentic Workflows, Multi-Agent Systems, OpenAI Daybreak Blue

AI Engineering & Integration

MCP, API & Tool Integration, Local LLM Integration

AI Development Tools

Claude Code, OpenAI Codex, AI-assisted Coding

Workflow Automation

n8n, Automated Workflows, Data Analytics Pipelines

Data & Cloud

Azure, Relational Database Design, SQL-based Data Processing

Robotics & Modeling

Robot control, Odometry, Mapping, Path planning, 3D modeling

Statistics

Hypothesis testing, GLMs, GAMs, Model diagnostics

LI-HSIANG CHAO

趙立翔

SOLUTION ENGINEER

EDUCATION

University of Colorado Boulder — M.S. Data Science, GPA 3.8/4.0

2024–2026

Statistical modeling · Database design & SQL · Data mining · Machine learning · Computer vision · Neural networks · Robotics

Tamkang University — M.S. Information Management, GPA 4.0/4.0

2023–2026

Scholarship Recipient

Thesis: A symbolic regression approach for clinical trial eligibility criteria optimization using electronic health record

This study presents an interpretable multi-objective machine learning framework for clinical trial cohort selection that outperforms the existing benchmark approach in treatment-effect estimation while balancing efficacy and population inclusivity.

National Yang Ming University — B.S. Life Science

2012–2016

WORK EXPERIENCE

LaplaceAI Co., Ltd.

Present

Forward Deployed Engineer

- Contributed to early-stage product development by designing AI agents and workflows.
- Developed and integrate automatic workflow and data analytics tools for client-specific solutions (Preventive medicine center).
- Participated in business development and designed task-oriented solutions.

Microbio group and Oneness Biotech Co., Ltd. (TW 4743)

Oct. 2017–Present

Research Assistant

- Developed analytical pipelines for efficiently identification of drugs responder.
- Conducted data analysis and statistical evaluation to support clinical projects.
- Contributed to licensing negotiation preparation for FB825 with Leo Pharma by developing a flow cytometry assay for identifying membrane-bound IgE+ B cell.
- Managed patent-related documentation workflow, ensuring compliance and timely filing.

RESEARCH WORKS & AWARDS

Clinical Trial Eligibility Criteria Optimization based on Electronic Health Records: A Machine-Learning Framework Powered by Symbolic Regression

Li-Hsiang Chao and C.-B. Cheng, 2026 · 2026 International Conference on Information Management (ICIM2026), May 16, 2026, Taipei, Taiwan

- Distinguished Award, Y. S. Educational Foundation AI Digital Technology Thesis Award
- Selected as the best paper of ICIM2026

Algorithmic Trading Systems

- Developed an algorithmic trading bot in MQL4, implementing multiple quantitative trading strategies.
- Designed a modular architecture integrating financial products databases and financial information APIs to automate trading signal generation, risk control, and order execution.

FathomNet ML Image Classification Competition, Kaggle

- Developed transformer models for unknown marine image classification and performance evaluation.

2019 Taipei Biotech Awards

Top 3 out of 108 participants, July 2019

- Innovation Award-Bronze Medal Award for FB825 Anti-CmX therapeutic antibody

2014 Poster Competition, Department of Life Science, YMU

Top 5, Oct. 2014

- Molecular mechanisms of hypoxia-induced sonic hedgehog in differentiated cortical neurons

2013 Poster Competition, Department of Life Science, YMU

Top 10, the Department of Life Science, Oct. 2013

- Protective effects of administration of N-Acetylcysteine amide in differentiated cortical neurons
